A walk through a lush lavender field on a pristine organic farm inspired the creation of Avalon Organic Botanicals.

We start at the source to create our unique line of therapeutic body care products derived from certified organic aromatic flowers and healing herbal botanicals.

Avalon's partnership with a fifth-generation family farm allows us to oversee the growing, harvesting and distillation of our certified organic lavender, rosemary, lemon verbena and mint.

Our certified organic ingredients are grown in accordance with the high standards and strict guidelines of the prestigious California Certified Organic Farmers.

Harvest occurs when plant conditions are optimum for obtaining our lavender hydrosol and pure essential oil.

Sickles are used to gently remove the aromatic flowering tops from the lavender plants.

The harvested plant material is carried off the field in white sheeting.

The harvest ready for distillation.

Our fresh lavender is loaded into the onsite distillation stills.

Avalon's master distiller insures the precise temperature for the pressurized steam, which passes through the plant material.

The steam passes through the plant material and gently releases the lavender pure essential oil and hydrosol. The vapors pass from the top of the still into a cooled condenser where they are returned to a liquid state for collection.

Since the renaissance, steam distillation has been the chosen method of procuring pure essential oils and hydrosols. This unique floral infused water retains all the energetic and therapeutic qualities of the original plant and is the key ingredient in Avalon Organic Botanicals.

The hydrosol is shipped and stored in specially designed totes that protect the precious contents from heat and light.

When the distillation process is completed, the lavender plant material is recycled.

The recycled lavender plant material is used as a nourishing mulch and natural, organic weed control for next year's crop.

Bees busy pollinating the lavender flowers create a delectable aromatic lavender honey.

Avalon Organic Botanicals stands as the exclusive choice in organic beauty and wellness.
