

The Regeneration Revolution

Funding the Regeneration Revolution

As we have repeatedly emphasized over the past decade, we cannot hope to solve the climate, human health, environmental, immigration, financial, and rural economic crisis without organic and regenerative food, farming, and land use becoming the norm (along with alternative energy, conservation, and natural health practices), rather than just the alternative.

According to numerous polls and focus groups, the majority of Americans already understand that organic farming and (nutrient-dense, fresh, home-cooked, organic) food is better for your health. A growing number also understand that organic and regenerative farming, animal husbandry, and land use are healthier and more humane for farm animals and better for the climate (reducing emissions, naturally sequestering excess atmospheric carbon) and the planet (reducing pollution, preserving and regenerating biodiversity).

The unavoidable problem is that the majority of people are economically stressed and time-constrained, and/or lacking in cooking skills. Consumers routinely “cut corners” by purchasing cheaper, highly-processed, non-organic food or by eating out (or ordering home delivery) in fast food chains, or conventional restaurants.

Bathed in Pesticides

The UK Off-Guardian reports:

“The volume of pesticide use and exposure is occurring on a scale that is without precedent and world-historical in nature. Agrichemicals are now pervasive as they cycle through bodies and environments. The herbicide glyphosate has been a major factor in driving this increase in use... In just under 20 years, much of the Earth has been coated with glyphosate, in many places layering on already chemical-laden human bodies, other organisms and environments.”

Pesticide applications in California grew 10% from 2005 to 2015 and is growing even much faster in large agricultural producers such as China (2500%), India (250%), Argentina, and Brazil.

Keep on Truckin’ in the Free World

With a massive truck convoy moving across Canada, cheered on in every town and city, with thousands of Canadian (and even U.S.) truck drivers rallying in Ottawa, calling for an end to COVID mandates, masks, and the crippling restrictions on small businesses and working class/rural livelihoods that the elite call the “Great Reset,” why are the mass media downplaying and censoring this Movement?

Watch this podcast, already viewed by over a million people, by one of OCA’s favorite visionaries, Russell Brand.

Farmers Stuck in a Chemical War Against Weeds

Bart Elmore in The Conversation reports:

“The herbicide dicamba [marketed by Monsanto and others] was supposed to solve farmers’ weed problems—instead it’s making farming harder for many of them... In 2021, thousands of U.S. growers reported to the Environmental Protection Agency that dicamba sprayed by other farmers – sometimes up to a mile and a half away – damaged crops in their fields. Complaints came from all over the country.

The list of affected plants was astounding: sycamore, oak and elm trees; azaleas, black-eyed Susans and roses; garden tomatoes, peppers and peas. According to an EPA memorandum, there were 2,700 “dicamba incidents,” affecting about 3.6 million acres, in 2017. Two years later, the number of incidents ballooned to 3,300.”

A Way of Life in Danger

The Progressive reports:

“Michael Pollan, in a sorrow-tinged New York Times account in 2016, detailed how President Barack Obama failed to break Big Ag’s stranglehold on farmers, even though, as an outsider candidate in the 2008 Iowa caucuses, he knew the problem well. When he left office eight years later, the stranglehold was tighter than ever.

“As Pollan wrote, farmers are often captive to a small number of giant processors and purveyors that control particular branches of the industry: beef slaughtering, chicken packaging, corn and soy processing, agrochemical sales, and seed selling. Dairy farmers have their own special hell with what’s called “monopsony”—having only a single powerful buyer in their region to process their perishable raw milk.”

Sign the Petition to Ban the Weaponization of Viruses and Pathogens

OCA’s Ban “Gain-of-Function” (GOF) campaign comes in the wake of mounting, now overwhelming, evidence that the COVID-19 pandemic arose out of a joint U.S.-China collaboration in Wuhan, China to “soup up” SARS bat coronaviruses, resulting in a catastrophic accident that has triggered the death of millions and detonated a multi-trillion-dollar meltdown of the global economy.

OCA and our allies have begun to build a U.S. and international coalition to ban all GOF experiments and rewrite global treaties such as the 1972 Biological Weapons Convention to prevent any and all PPPs (Potential Pandemic Pathogens) from being collected and engineered in labs, whether civilian or military.

Take Action: Sign the Ban GOF Petition: <https://orgcns.org/swp>
