

The Ukrainian Biolabs

Despite being signatories (along with China, Russia, and 183 nations) to the Biological Weapons Convention of 1972 the U.S. military and its Big Pharma collaborators have been quietly funding the “dual-use” (medical and military) weaponization of viruses and pathogens in 26 secretive biolabs in the Ukraine, just as the Russians did before them.

But aren't there supposed to be serious penalties (i.e. life in prison) for violating the BWC and engineering biological weapons? Not really. All you have to do is hide behind the excuse, especially if you are a Superpower, that the reckless “dual-use” research you are carrying out or funding is for “medical purposes only.”

State of the Regeneration Movement

Global warming and its collateral damage to public health, the environment, biodiversity, and economic livelihoods can actually be reversed through a global scaling up of organic and regenerative best practices in combination with energy conservation and a transition to renewable energy.

In 2022 and beyond the OCA, Regeneration International, and our allies will continue our efforts to educate and mobilize the body politic, across party lines and the rural-urban divide, to understand the importance of moving organic and agro-ecological food and farming to its next stage, which we call regenerative organic.

Dr. Mercola Interviews Ronnie Cummins on Regeneration

The Organic Consumers Association (OCA) is part of a family of organizations that include Regeneration International and it's Mexico affiliate, Via Organica.

The Regeneration International research farm in Miguel de Allende, Mexico, has started a reforestation project using mesquite trees and agave plants.

Agave leaves (which have always been discarded and considered useless) and mesquite pods can be fermented and turned into nutritious animal feed that costs one-third to one-quarter of the price for alfalfa.

Revenge of the Putin Nazis

Germany-based CJ Hopkins writes:

“...Vladimir Putin, leader of the Putin-Nazis and official “Evil Dictator of the Day,” has launched a Kamikazi attack on the United Forces of Goodness (and Freedom) to provoke us into losing our temper and waging a global thermonuclear war that will wipe out the entire human species and most other forms of life on earth!

Biowar or Biodefense?

Gene engineer and vaccine developer Robert Malone writes: “I have spent most of my career deeply involved in the US Biodefense enterprise. I have worked closely with biodefense research teams at USAMRIID, DTRA, and MIT Lincoln Lab. I was once a business partner with a retired CIA officer who was deeply involved in the DoD biodefense enterprise, and I have co-published with another. I once worked for the Dynport Vaccine Company, which had the DoD contract for ‘advanced development’ (basically, clinical testing) of virtually all biodefense medical countermeasures for the US Department of Defense. “...But I never really allowed myself to confront the possibility that we might not be the good guys, the white hats...”

We Need Your Help

We at OCA are optimistic about the future, despite the war in Ukraine (and Yemen, Syria, Palestine, Kashmir, Somalia, et al) and the continuing warmongering and gridlock in the U.S. Congress. We are of course enormously relieved that the highly transmissible, but far less virulent Omicron variant definitely marks the beginning of the end of the pandemic and (temporarily) most of the mandates.

Now is the time for resisting illegitimate authority, and picking up the pieces of our shattered Democracy. Now is the time to join together, left and right, urban and rural, under the banner of organic and regenerative food, farming, and land use, natural health, peace, justice, disarmament, and constitutionally-based participatory democracy.

Our goals for 2022 and beyond are clear: shut down the “dual-use” bioweapons labs. Stop the weaponizing of pathogens that caused the COVID-19 pandemic. Bring peace, natural health, food, justice, and democracy constituencies together in a new populist alliance. Make organic food-as-medicine, and natural health practices and remedies, the norm, not just the alternative. We at OCA want to thank you for your loyalty, support, and engagement in this time of Crisis. Moving forward we will continue our decades-long campaign to educate and mobilize the public. As always we will expose the bad—how our deteriorating public health and chronic disease epidemic is directly related to our degenerative food, farming, and land use practices—while highlighting the good—how organic and local food and natural health practices can resolve our health, environmental, and climate crisis.

But we need your help to step up our truth-telling as we campaign to regenerate our politics, food, farming, and health. If you've already donated recently, thank you so much for your support. If not please consider giving us a donation now.
