

## **Regenerating Our Health & Food**

### **Making Our Children Sick**

Regeneration Health International Pediatrician Dr. Michelle Perro writes: “So many ill children reveal the ways we have outgrown our medical model and our predominant food production systems. The problems our kids suffer from most persistently today are complex, arising from a multisystem dysfunctional biological catastrophe, particularly in relation to immunity, autoimmunity, and the health sequelae that arise from these problems. These diseases suggest a body that is both confused and collapsing under the pressure of so many toxic exposures. If we are looking for evidence that our food systems have failed us, we should pay attention to these children.”

### **Closing a Giant Dairy Loophole**

After years of fighting against corporate and government corruption of organic standards, including a USDA loophole allowing heifers from conventional dairies (fed with cheap, imported, often fraudulent GMO grains) to be added to organic dairy herds, giving large confinement dairies an advantage over smaller grass-fed family farms, the organic community appears to be gaining a victory.

### **Seed Money: Monsanto’s Monstrous History**

GM Watch reviews a new book by Bartow J. Elmore on Monsanto, a company OCA and our allies have been fighting against for decades.

As Jonathan Matthews points out, Seed Money: Monsanto’s Past and Our Food Future:

“Despite being deeply researched, the book provides a lively and lucid account of the massive toxic impact Monsanto has had on our world, as well as the company’s unsuccessful attempt to escape its toxic legacy by shapeshifting into the world’s largest seed company and a pioneer in genetic engineering in agriculture...”

### **Numb and Annoyed**

In the wake of the pandemic, many of us are trying to regain our mental and physical health and come to terms with our outrage. Tessa Lena, aka Tessa Fights Robots, reports:

“Last week, my home city of New York lifted the mandates. They kinda, sorta lifted the mandates...Hooray. They’ve managed to turn basic independent existence into a privilege to be earned. Hooray. So if you really want to know how I feel, I feel numb and annoyed.”

### **Can Large Confinement Dairies Actually Become Regenerative?**

Gosia Wozniaca in Civil Eats reviews the efforts of several large corporate dairy brands (Danone/Horizon, General Mills, and Stonyfield), some of whose farms are certified USDA organic, some not, to reduce their carbon footprint and improve the environment even as most of their suppliers continue to feed herbivore cows grain and keep them confined in barns most of the year. Are these dairies and dairy brands truly moving in a regenerative direction, or is this just another example of corporate greenwashing, with minimal improvements designed to increase corporate profits?

### **Biolabs in Your Backyard? Take Action**

Did you know that genetic engineering isn’t used just in food and agriculture, but also to weaponize pathogens and create biological weapons?

It’s not surprising when you learn what Monsanto was doing before it came up with its first GMOs for food production.

Monsanto was working as a military contractor. It made Agent Orange for the Vietnam War, and earlier in the 1960s and 70s, refined plutonium for the Manhattan Project that produced the atomic bombs we dropped on Japan in World War II.

If you’re just as concerned about GMOs used for biological weapons as you are about GMOs in food and agriculture, please...

Sign the petition to stop the genetic engineering of dangerous pathogens: <https://orgcns.org/swp>

Answer the Biolabs in Your Backyard survey to tell us which biolabs you’re most concerned about:

### **New Podcast Episode Going Live!**

In OCA’s weekly one-hour podcast we go over the current burning issues featured in Organic Bytes, “connecting the dots” between the different articles and answering questions from our subscribers. The OCA Thursday podcast is free, and you can watch previous episodes, but you must register at [Rokfin.com](https://Rokfin.com)—which thousands of our subscribers have already done.

Register here to watch OCA’s new podcast:
