

Amplifying Positive Solutions

Speak Out: Break the Spell

The last two years, The Pandemic Years, for many if not most of us, have been the most difficult, stressful, and frightening years of our lives. A critical mass of the population (estimated by renowned psychologist Mattias Desmet at 30%), even those who were once our allies in the struggle for health, justice, peace, organics, and environmental regeneration, seemed to have literally lost their minds.

So what can we do? As Desmet explains we must continue speaking out and resisting, just as we've been doing, utilizing all non-violent means: "... we should never forget... that speaking out has an immediate effect. Maybe not that it wakes the masses up, but that it disturbs the process of mass formation and the hypnosis. And in that way, prevents the masses [from becoming] highly destructive, literally destructive, towards the people who do not go along with them."

Regenerative Solutions

Regenerators, young and old, given our current situation, need to operate on the old adage that "the darkest hour is right before the dawn." Instead of just dwelling on the negative, on the things that divide or frighten us, we need to search out and highlight today's positive trends, best practices, and solutions. For the OCA and Regeneration International community this means not just focusing on the latest corruption and criminality of the ruling class and the technocrats, not just the delusions and self-destructive behavior of those brainwashed by the Establishment narrative, but on finding, highlighting, and scaling up real life regenerative alternatives.

Organic Community Slams Genetically Engineered "Fake Milk"

The Non-GMO Project reports:

"In recent years, "animal-free" dairy proteins have found their way into everything from ice cream to cream cheese to snack bars, but many shoppers, food manufacturers and retailers are unaware that these are actually unlabeled and unregulated GMOs.

'Synbio dairy products are GMOs because they are created by genetically engineering a microbe like yeast to excrete milk proteins,' said Megan Westgate, founder and executive director of the Non-GMO Project... "That's the definition of unnatural.'

The synbio dairy industry is rapidly expanding with a significant infusion of investment. According to the biotech industry's Good Food Institute, nearly \$2 billion has been invested in developing 'precision fermented' products like synbio dairy in the past year alone."

Federal Court Finally Smacks Down EPA on Monsanto's Glyphosate

Carey Gillam writes:

"The U.S. Environmental Protection Agency (EPA) failed to follow established guidelines for determining cancer risk, ignored important studies, and discounted expert advice from a scientific advisory panel in officially declaring that the weed killer glyphosate was "not likely to be carcinogenic," a federal court said in an order issued Friday.

The 9th U.S. Circuit Court of Appeals said the agency's 2020 assessment of glyphosate, the active ingredient in Roundup, was flawed in many ways, applying "inconsistent reasoning" in finding that the chemical does not pose "any reasonable risk to man or the environment."

Iowa Residents Stop a Massive Factory Farm

The Socially Responsible Agriculture Project (SRAP) reports:

"While CAFOs aren't easy to stop in Iowa, local residents from Tama County showed that it can be done with some grit, determination, persistence—and most importantly—public pressure."

Recovering from Long COVID and/or Vaccine Injury

Mercola.com reports:

"COVID-19 is clearly no longer an emergency. The real emergency now is the continued use of the COVID 'vaccines,' because they're creating injuries on a level that is truly alarming and unprecedented. VAERS data reveal the COVID jabs have caused more harm in 18 months than all other vaccines on the market, combined, over the past three decades.

Raw data from the Pfizer trial also show the shots were associated with an increased risk for death from the start, and both Pfizer and the FDA knew it.

Data also show highly 'vaccinated' and boosted nations are now experiencing record case and death rates from COVID compared to countries with low injection rates.

We're now finding the COVID shots have negative efficacy, meaning, if you have received the shot and are exposed to COVID, you are more likely to get sick, not less likely, compared to someone who is unvaccinated.

The Frontline COVID-19 Critical Care Alliance (FLCCC) has developed a protocol for those injured by the COVID jabs called I-RECOVER, which you can download from www.covid19criticalcare.com in several different languages."
