

Truth-Telling, Half-Truths, & Damn Lies

Vandana Shiva on Corporate Propaganda for SynFoods

Vandana Shiva writes:

“Fully artificial food is an increasingly popular trend focused on developing a new line of synthetically produced, ultra-processed food products by using recent advances in synthetic biology, artificial intelligence, and biotechnology. These new products seek to imitate and replace animal products, food additives, and expensive, rare, or socially conflictive ingredients (such as palm oil). Biotech companies and agribusiness giants are seeing the opportunity to move into this promising market of ‘green’ consumption and hence these products are marketed to a new generation of environmentally conscious consumers who are growing critical of the grim realities of industrial food production. As a result, meatless burgers and sausages, as well as imitations of cheese, dairy products, seafood, and others, have begun to flood the market, being found anywhere from fast food chains to local grocery stores.”

Bayer and Monsanto Under Fire for Toxic Pesticides

The St. Louis Post-Dispatch reports:

“The U.S. Supreme Court on Tuesday rejected a bid by biotech giant Bayer to end thousands of lawsuits alleging its Roundup weedkiller causes cancer, likely costing the company billions of dollars in settlements.

The decision is another key defeat for Bayer. Together, the setbacks are expected to eliminate a legal standstill in unresolved cases, according to plaintiffs’ lawyers. Bayer now essentially has two choices, they say: Go to trial to fight more cases, or reach additional out-of-court settlements.

‘Everything has kind of fallen apart on Bayer,’ said Jim Onder, an attorney from the St. Louis-based Onder Law Firm. ‘They’re kind of at the end of the rope.’

Bill Gates and the Frame Game

The Brownstone Institute reports on what appears to be an admission at the Davos, Switzerland world elite gathering recently by vaccine profiteer Bill Gates that the experimental COVID “vaccines” don’t work to stop transmission and that vaccine passports are not viable. “In the course of a 56-minute panel discussion the vaccine pusher [Gates] extraordinaire admitted (starting at the 18:22 mark) that the COVID vaccines do not block infection and that the duration of whatever protection they bring to the table is extremely short.”

Rules for Regenerators: Connect the Dots

A rule for Regenerators I lay out in my 2020 book *Grassroots Rising*, is to “connect the dots,” to understand and start off with the most pressing or important issues for an individual, constituency, or community and link these concerns to the action, strategy, or campaign we are trying to get them to understand and take action on.

As I point out in Chapter 2: “In addition to highlighting positive solutions, it is important to keep in mind that people’s situations and perspectives are different. We all have different passions or priorities. One size or one approach does not fit all. Therefore, we need to integrate our motivating or Regeneration messages with the specific issues and concerns that are most important to grassroots constituencies, and then lay out, in everyday language, a strategy that makes people understand that we can actually solve the problems they care about the most, while also solving a host of other pressing problems at the same time.”

Toxic Sewage Sludge in Your (Non-Organic) Food?

Even though USDA Organic standards prohibit the spreading of toxic sewage sludge on certified organic farms, something OCA and the organic community fought hard for from 1997-2002, it is routine practice for America’s “conventional” (chemical-intensive, energy-intensive, GMO, factory-style) farmers to allow sewage sludge to be sprayed on their fields as a low-cost or no-cost “fertilizer.” But as our fellow activists in the Alliance for Natural Health point out, we’re not just talking about human and animal excrement on the fields of non-organic farms, but deadly PFAS “Forever Chemicals” as well:

“Your food and drinking water could be contaminated with PFAS ‘forever chemicals,’ at levels that are hundreds of times higher than what is considered safe, but the EPA is too busy looking out for industry to care.”

New York to Offer "Monkeypox Vaccine"

From the lies and damn lies department. Tessa Lena covers the latest, likely engineered pathogen, Monkeypox, designed to keep us all in a panic, rolling up our sleeves, and obeying the latest mandates: “They have the nerve to even say that the demand [for the Monkeypox vaccine] exceeds the supply. ...the past two years have shown to our generation that with enough terroristic messaging and attacking people on every sensory front, you can temporarily disable the innate self-preservation instincts in very intelligent people by creating an emotional ‘cytokine storm’ that floods the gates of rational thinking and makes people act against their interests... but even so, at this point, nobody cares for the stupid monkeypox. (I think I am going to just use that word.)
