### **COVID 2022: Murder Most Foul**

Two and a half years ago (April 29, 2020), I wrote what was then considered by many a controversial article called “Murder Most Foul: The Perps Behind COVID-19.” The title of my article was inspired by Bob Dylan’s song “Murder Most Foul,” which was released, just as the COVID Pandemia was emerging, in February 2020.

Dylan’s powerful, haunting ballad revisits the 1963 assassination of President John F. Kennedy in Dallas, in effect a coup d’état carried out by his enemies. Kennedy’s assassination in plain sight and the ensuing cover-up by the Warren Commission was engineered by a ruthless cabal of the Deep State including the CIA, Edgar Hoover’s FBI, the military, military-industrial contractors, Texas oilmen, Vice-President Lyndon Johnson, the mafia, Cuban exiles, and an indentured mass media. This “Murder Most Foul,” the Great Reset of the 1960s, was welcomed, aided, and abetted by strategic elements of the corporate elite, including war hawks in the conservative wings of the Republican and Democratic parties.

### **CDC Finally Admits Its COVID Policies Failed**

Suzanne Burdick from Children’s Health Defense reports:

“The Centers for Disease Control Wednesday announced a “drastic” overhaul of the agency after admitting to failures in its management of the COVID-19 pandemic. But some critics said the plan isn’t adequate and suggested replacing the agency with a public health model that operates independently from Big Pharma... The Centers for Disease Control (CDC) Wednesday announced a “drastic” overhaul of the agency aimed at modernizing it and rescuing its reputation after widespread criticism of its COVID-19 response and, more recently, the monkeypox outbreak.”

### **Monsanto/Bayer’s Glyphosate and Alzheimer’s Disease**

Carey Gilliam writes:

“A new study recently published in the Journal of Neuroinflammation found that glyphosate, the active ingredient in Roundup already linked to cancer, may cause an increased risk of neurologic disorders such as Alzheimer’s disease.

Researchers from Arizona State University and the Arizona Alzheimer’s Consortium said their findings show for the first time that glyphosate crosses from the bloodstream into the brain, potentially increasing the risk of a range of neurological disorders.

### **The Secret Military History of Monsanto**

In this episode of our series on the skeletons in the closet of the worlds most hated company, Monsanto (now Bayer), we talk to Jeremy Kuzmarov. He has uncovered details of the early days of the U.S. Chemical, Biological, Radiological and Nuclear weapons program. The secrets of the post-WWII period include mind-control, murder and experimentation on uninformed Americans. Jeremy will provide context for what we’ve learned about Monsanto’s role in some of these programs, including its participation in the Manhattan Project and spin-off operations involving open-air testing of radiological weapons over U.S. cities and nutrition studies where women of childbearing age were fed radioactive iron.

### **Doctor Warns That Monkeypox Appears to Be Engineered**

“There has been much speculation that the novel coronavirus was a bioweapon developed in a Chinese Communist Party (CCP) lab. Now, an American doctor has a theory that the new monkeypox outbreak may also have similar nefarious origins.

Dr. Syed Haider told The Epoch Times that the development of the monkeypox outbreak seems identical to the way COVID-19 was introduced to the world.

According to the Centers for Disease Control and Prevention (CDC), monkeypox is a rare disease caused by infection with the monkeypox virus, which is part of the same family of viruses that causes smallpox. The symptoms of monkeypox are similar to those of smallpox, but are much milder and rarely fatal.

### **Seven Ways to Instill Healthier Eating Habits in Your Kids**

Dr. Ronald Hoffman writes:

“While some surveys suggest that Americans’ embrace of junk food peaked in the early 2000s and is now declining, a review in the American Journal of Clinical Nutrition finds the opposite. While, indeed, there were significant decreases in particular junk food categories (e.g. candy, cakes, and pies), they were offset by increases in other categories, especially snack and meal bars. This parallels a trend toward supplanting sugary soda with “energy drinks”, juice beverages, and diet soda.”
