

Frankenfoods 2.0

The Onslaught of Genetic Engineering 2.0

Over the past 30 years OCA and our allies across the world have fought hard against gene-spliced GMO foods and crops and the toxic pesticides and chemicals that always accompany them.

But now Bill Gates, the gene-engineers, the World Economic Forum, and the Davos “Great Reset” technocrats and authoritarians, the folks who anticipated and profited off of COVID and the lockdowns, have a bold new plan to shove down our throats: get rid of animal agriculture, ranching, and small farms entirely. Make lab-engineered fake meat, fake milk, and fake cheese the new normal. Pretend they’re not genetically engineered and therefore they don’t have to be properly safety-tested and labeled. Divide and conquer vegans and carnivores, urban consumers and rural communities. Drive into bankruptcy and off the land the billion ranchers, small farmers, and herdsman/women around the world, who depend on raising animals and livestock for their survival.

Monsanto’s Smear Merchant: The Genetic Literacy Project

GM Watch reports:

“Recently the Genetic Literacy Project has been heavily targeting critics of the herbicide Roundup, now owned by Bayer, with a barrage of articles, podcasts, and tweets, in which the controversial University of Florida scientist Kevin Folta has been much to the fore.”

How to Fight Drought and Save California & Southwestern Farmlands Despite a Deadlocked Congress

Noted economist and visionary Ellen Brown lays out a plan for how America can fight the unprecedented drought and water crisis and regenerate parched farmlands and rangelands in the arid and semi-arid regions of California and the Southwest, drawing lessons from government infrastructure programs during the Great Depression, that can be carried out without increasing the budget deficit and bypassing a hopelessly deadlocked Congress.

As Brown explains: “Congress has passed two major infrastructure bills in the last year, but imminent needs in infrastructure funding remain. The 2021 Bipartisan Infrastructure Law chiefly focused on conventional highway programs, and the Inflation Reduction Act of 2022 (IRA) mainly centered on energy security and combating climate change. According to the American Society of Civil Engineers (ASCE), over \$2 trillion in much-needed infrastructure is still unfunded, including projects to address drought, affordable housing, high-speed rail, and power transmission lines.”

Monsanto/Bayer Declares War on the 30,000 Roundup Cancer Victims Who Are Suing Them

Carey Gilliam writes:

“Monsanto owner Bayer AG is rejecting a proposed ‘global resolution plan’ put forward by plaintiffs’ lawyers as a last chance to try to settle tens of thousands of pending Roundup cancer claims before a wave of new trials get underway, newly filed court documents show.

The company stance comes at a pivotal point in the ongoing nationwide litigation involving plaintiffs who allege they developed non-Hodgkin lymphoma (NHL) from exposure to Monsanto’s glyphosate-based weed killers, such as Roundup.

How “Modern” Medicine Fails to Protect Children’s Health

Nate Doromal writes:

“Attention, parents, family members, and concerned citizens! Children’s health is getting worse. And it has been doing so for decades.

While the COVID-19 pandemic brought about widespread changes, forcing us to reexamine our lives and values in the wake of the crisis, it also brought widespread examination and criticism of our medical systems.

Despite the fear-mongering from the media, infectious diseases, including COVID, are not the foremost health concerns for children. A look at the top ten causes of childhood mortality reveals the top three medically-related conditions are cancer, congenital anomalies, and heart disease. The British Medical Journal (BMJ) stated in 2016 that ‘the primary burden of disease in children and young people has shifted from infectious diseases towards chronic conditions...’”

The Psychology of Totalitarianism

Throughout the COVID crisis, Big Pharma and the mass media, aided and abetted by opportunistic and corrupt politicians, vaccine profiteers, and health officials, have indulged in what can only be described as organized fear-mongering, spreading mass panic, mass psychosis, and hatred among a critical mass of the body politic already suffering from social isolation, free-floating anxiety, and pent-up anger. This psychological plague, a fundamental ingredient in the onset of totalitarian rule, has been dubbed “Mass Formation” by noted Belgian psychologist Mattias Desmet.
