

## **Defending Ourselves**

### **Bringing the COVID-19 Cabal to Justice**

Dr. Mercola recently interviewed Dr. Francis Boyle for the third time since the COVID-19 outbreak. Boyle, as you may recall, is a noted anti-war and anti-biological weapons legal expert. He is the author of the 1989 federal law, the Biological Weapons Anti-Terrorism Act, passed unanimously by the U.S. Congress and signed into law by the White House, banning the production of biological weapons and dangerous “gain-of-function” experimentation, including genetically engineered pathogens such as SARS-CoV-2. The BWATA Act basically serves as implementing legislation for the 1972 Biological Weapons Convention, signed by the U.S., China, and most nations.

### **Widespread Adoption of GE Fake Meat Threatens the Livelihoods of 1.3 Billion Peasants and Small Farmers**

IPS News reports:

“Growing negative narratives about cattle’s contribution to climate change are shrinking the growth of the strategic livestock sector on which the livelihoods of more than 1.3 billion people in the world depend.

In Africa, livestock farming is life, providing food, nutrition, jobs, draught power, income generation, and a source of cultural significance. But the benefits of keeping cattle, goats, sheep, and pigs are lost when it comes to the impact of livestock on the environment are mentioned...

Researchers, farmers, and entrepreneurs, lamenting the negative perception about livestock in contributing to climate change, are calling for a balanced discussion to highlight livestock production, not as a problem but as a solution in tackling climate change, especially in developing countries...”

### **U.S. Stockpiles \$290 Million in NIH-Funded Radiation Sickness Drug**

Children’s Health Defense writes:

“In what pharmaceutical industry publication Fierce Pharma called ‘a troubling sign of the times,’ the Biden administration this week purchased \$290 million worth of Nplate, a radiation sickness drug – with serious side effects – developed by drugmaker Amgen in partnership with several government agencies, including the National Institute of Allergy and Infectious Diseases, headed by Dr. Anthony Fauci...

Officials downplayed any connection to the Russia-Ukraine conflict. However, two days after the announcement, amid growing tensions related to the conflict between Russia and Ukraine, President Biden said the risk of nuclear “Armageddon” is at its highest since the Cuban Missile Crisis in 1962.”

### **Moms Across America Has Tested Public School Lunches for Toxicity and Nutritional Value, and the News is Not Good.**

Stephanie Seneff writes:

“Moms Across America (MAA) is a nonprofit consumer group founded by Zen Honeycutt that advocates for lifestyles that support good health and longevity. A particular focus of the group has been the issue of pesticide contamination in foods, especially the pervasive herbicide glyphosate (the active ingredient in Roundup).

Moms Across America has just released the results of a study they conducted on public school lunches, purchased by moms and sent frozen by 2-day shipping directly to a laboratory where they were analyzed for many toxic chemicals, toxic metals, and nutritional deficiencies. The samples covered 18 cities in 15 states.

### **The Promise of GE Foods 2.0: Haven’t We Heard All This Before?**

Ken Roseboro writes:

“In its SEC filing disclosing the risks of its technology, Ginkgo Bioworks tells a different story: ‘The genetically engineered organisms and materials that we develop may have significantly altered characteristics compared to those found in the wild, and the full effects of deployment or release of our genetically engineered organisms and materials into uncontrolled environments may be unknown... Such deployment or release... could impact the environment or the health and safety of our employees, our customers’ employees, and the consumers of our customers’ products.’

Similar risks are found with gene editing. Proponents of the technology say it is precise. But an article in Nature magazine from July 2020 described how the use of gene editing on human embryonic cells caused “chromosomal mayhem.” That is not precision...”

### **Agriculture, Drugs, Risky Gain of Function Experiments, and Human “Biological Programming”**

As Derek Broze reports:

“On September 12, the White House issued an executive order titled, Advancing Biotechnology and Biomanufacturing Innovation for a Sustainable, Safe, and Secure American Bioeconomy, which quickly made the rounds of the independent media. Patrick Wood at Technocracy.news interpreted the EO as an attempt to ‘institutionalize Eugenics and Transhumanism...’
